

wherein each of the coaxial cable connectors is aligned with one of the grooves.

4. A device according to claim 1, wherein the longitudinal axis of each of the coaxial cable connectors is located in the same plane.

5. A device according to claim 1, further including a ground bus located in the first housing and wherein the cable television splitter includes a mounting tab securing the splitter to the ground bus.

6. The device according to claim 1 wherein the housing includes an opening and the longitudinal axes of the coaxial cable connectors are perpendicular to the plane defined by the opening.

7. A telephone and cable television network interface device, including:

- a first housing having a first compartment and a second compartment;

- a first terminal, located in the first compartment, for connection to telephone service;

- a second terminal, located in the second compartment, for connection to a telephone;

- a cover for restricting access to the first compartment;

- a cable television splitter located in the first housing, the splitter including a second housing having a first portion located in the first compartment and a second portion located in the second compartment;

- at least one coaxial cable connector located in the first portion of the second housing;

a plurality of second coaxial cable connectors located in the second portion of the second housing; and

wherein each of the coaxial cable connectors has a longitudinal axis and the longitudinal axes of all of the coaxial cable connectors are parallel.

8. A device according to claim 7, wherein the coaxial cable connectors face the same direction.

9. A device according to claim 7, further including a plurality of grooves in the first housing and wherein each of the coaxial cable connectors is aligned with one of the grooves.

10. A device according to claim 7, wherein the longitudinal axis of each of the coaxial cable connectors is located in the same plane.

11. A device according to claim 7, further including a ground bus located in the first housing and wherein the cable television splitter includes a mounting tab securing the splitter to the ground bus.

12. The device according to claim 7 wherein the housing includes an opening and the longitudinal axes of the coaxial cable connectors are perpendicular to the plane defined by the opening.

13. A telephone and cable television network interface device, including:

a first housing having a first compartment and a second compartment;

17. A device according to claim 13, wherein the axes of each of the coaxial cable connectors are parallel.
